

Circle Formulas

$$\underline{\text{Circumference} = 2 \cdot \pi \cdot \text{radius} = \pi \cdot \text{diameter}}$$

$$\underline{\text{Circle Area} = \pi \cdot r^2 = \frac{1}{4} \cdot \pi \cdot d^2}$$

Volume :- Area x Thickness

Weight :- Volume X density

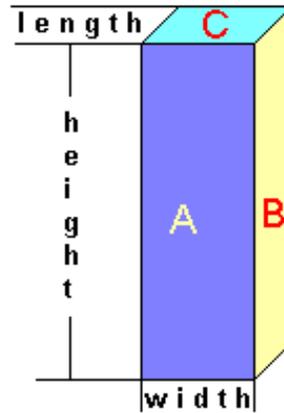

Sphere Formulas

$$\underline{\text{Sphere Surface Area} = 4 \cdot \pi \cdot r^2 = \pi \cdot d^2}$$

$$\underline{\text{Sphere Volume} = \frac{4}{3} \cdot \pi \cdot r^3 = \frac{(\pi \cdot d^3)}{6}}$$

Weight :- volume x density

Rectangular Prisms (or Solids)

The above figure is called a *rectangular prism*.

Volume = length × width × height

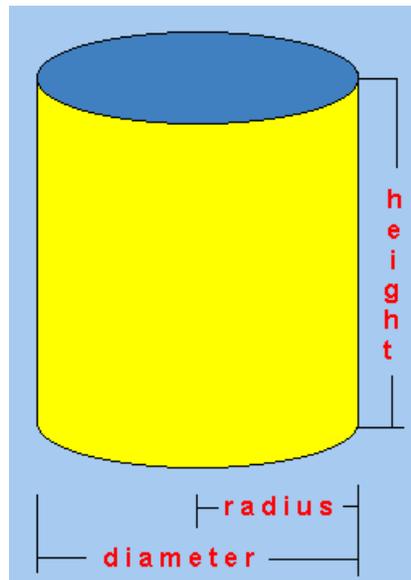

Area of Face 'A' = height × width

Area of Face 'B' = height × length

Area of Face 'C' = width × length

Weight = volume × density

Cylinder Formulas

$$\underline{\text{Surface Area} = (2 \cdot \pi \cdot r^2) + (2 \cdot \pi \cdot r \cdot \text{height})}$$

Where $(2 \cdot \pi \cdot r^2)$ is the surface area of the "ends" and $(2 \cdot \pi \cdot r \cdot \text{height})$ is the lateral area (the area of the "side").

$$\underline{\text{Volume} = \pi \cdot r^2 \cdot \text{height} = \frac{1}{4} \cdot \pi \cdot d^2 \cdot \text{height}}$$

$$\text{Weight} = \text{volume} \times \text{density}$$
