

WELDING SAFETY SUGGESTED BY AMERICAN WELDING SOCIETY

fumes and gases can be dangerous to your health

- KEEP your head out of the fumes.
- DON'T get too close to the arc. Use corrective lenses if necessary to stay a reasonable distance away from the arc.

USE ENOUGH VENTILATION or exhaust at the arc, or both, to keep the furnes and gases from your breathing zone and the general area.

IN A LARGE ROOM OR OUTDOORS, natural ventilation may be adequate if you keep your head out of the furnes (See below).

USE NATURAL DRAFTS or fans to keep the furnes away from your face.

ble distance away from the arc.

READ and obey the warning label that appears on all containers of welding materials.

If you develop unusual symptoms, see your supervisor. Perhaps the welding atmosphere and ventilation system should be checked.

- BE SURE adequate ventilation is available when welding in confined areas or where there are barriers to air move-
- SMOKE EXTRACTOR welding gun. For semiautomatic welding processes, equipment exists for exhausting the lumes at the arc.

wear correct eye, ear, and body protection

PROTECT your body from welding spatter and are flash with protective clothing including woolen clothing, flame-proof apron and gloves, leather leggings, and high boots.

PROTECT others from spatter, flash, and glare with protective screens or barriers.

IN SOME AREAS, protection from noise may be appropriate

PROTECT your eyes and face with welding helmet properly fit-ted and with proper grade of filter plate (See ANSI Z49.1).

Also, wear safety glasses in work area AT ALL TIMES.

special situations

- DO NOT WELD OR CUT containers or materials which previously had been in contact with hazardous substances unless they are properly cleaned. This is extremely dangerous.
- DO NOT WELD OR CUT painted or plated parts unless special precautions with ventilation have been taken. They can release highly toxic furnes or gases.

Refer to the references shown below for directions on how to deal with such special situations.

cooperating for safety and employees is vital to the success of every company. By working togethe toward the common goal — SAFETY IN WELDING — everyone wins! Welders and their supervisors should have adequate safety training. AMERICAN WELDING SOCIETY

DO NOT TOUCH LIVE ELECTRICAL PARTS

electric shock can kill

BE SUFE of loves have no holes.
BE SUFE to stuy dry, do not weld when you are wet.
BE SUFE equipment is turned OFF when not in use.
DO NOT use cables that are too small, damaged, or poorly spliced.
DO NOT warp cables around your body.

PROTECT compressed gas cylinders from

excessive heat, mechanical shocks, and arcs; fasten cylinders so they cannot fall.

REMOVE all potential fire hazards from welding

additional precautionary measures

▲ WARNING

1 CALIFORNIA PROPOSITION 1

Diesel engine exhaust and some of its constituents are known to the State of California to cause cancer, birth defects, and other reproductive harm.

The Above For Diesel Engines

The engine exhaust from this product contains chemicals known to the State of California to cause cancer, birth defects, or other reproductive harm.

The Above For Gasoline Engines

ARC WELDING CAN BE HAZARDOUS. PROTECT YOUR-SELF AND OTHERS FROM POSSIBLE SERIOUS INJURY OR DEATH. KEEP CHILDREN AWAY. PACEMAKER WEAR-ERS SHOULD CONSULT WITH THEIR DOCTOR BEFORE

Read and understand the following safety highlights. Fo additional safety information, it is strongly recommended that you purchase a copy of "Safety in Welding & Cutting-ANSI Standard 249.1" from the American Welding Society P.O. Box 351040, Mismi, Florida 33135 or CSA Standard W117.2-1974. A Free copy of "Arc Welding Safety" booklet £205 is available from the Lincoln Electine Company 22801 St. Clair Avenue, Cleveland, Ohio 44117-1199.

BE SURE THAT ALL INSTALLATION, OPERA-TION, MAINTENANCE AND REPAIR PROCE-DURES ARE PERFORMED ONLY BY QUALIFIED INDIVIDUALS.

FOR ENGINE powered equipment.

Turn the engine off before troubleshooting and mainten work unless the maintenance work requires it to be run

- To prevent accidentally starting gasoline engines while surring the engine or welding generator during maintenance work, disconnect the spark plug wires, distributor cap or magneto wire as appropriate.

ELECTRIC AND MAGNETIC FIELDS may be dangerous

- 2.d. All welders should use the following procedures in order to minimize exposure to EMF fields from the welding circuit:
 - 2.d.1. Route the electrode and work cables together Secure them with tape when possible.
 - 2.d.2. Never coil the electrode lead around your body

 - 2.d.5. Do not work next to welding power source

ELECTRIC SHOCK can kill.

The electrode and work (or ground) circuits are electrically "hot" when the welder is on. Do not touch these "hot" parts with your bare skin or wet clothing. Wear dry, hole-tree gloves to insulate hands.

Insulate yourself from work and ground using dry insulation. Make certain the insulation is large enough to cover you full area of physical contact with work and ground the contact with the contact with

In addition to the normal safety precautions, if welding must be performed under electrically hazardous conditions (in damp locations or while wearing wet clothing; on metal structures such as floors, gratings or scaffolds; when in cramped positions such as sliting, kneeling or liping, if there is a high risk of unavoid able or accidental contact with the workpiece or ground) use the following equipment:

- Semiautomatic DC Constant Voltage (Wire) Welder.
- AC Welder with Reduced Voltage Control.

- In semiautomatic or automatic wire welding, electrode reel, welding head, nozzle or swelding gun are also electrically "hot".
- Always be sure the work cable makes a good electric connection with the metal being welded. The connection should be as close as possible to the area being welded.
- Ground the work or metal to be welded to a good el (earth) ground.
- Maintain the electrode holder, work clamp, welding and welding machine in good, safe operating conditi Replace damaged insulation.
- 3.g. Never dip the electrode in water for cooling.
- 3.h. Never simultaneously touch electrically "hot" parts of electrode holders connected to two welders because voll-age between the two can be the total of the open circuit voltage of both welders.
- When working above floor level, use a safet yourself from a fall should you get a shock.
- 3.j. Also see Items 6.c. and 8.

ARC RAYS can burn.

- 4.a. Use a shield with the proper filter and cover plates to protect your eyes from sparks and the rays of the arc when welding or observ-ing open arc welding. Headshield and filter lens should conform to ANSI Z87, I stan-
- 4.c. Protect other nearby personnel with suitable, non-flammabl screening and/or warn them not to watch the arc nor expos themselves to the arc rays or to hot spatter or metal.

FUMES AND GASES can be dangerous.

can be dangerous.

5.a. Welsing may produce furnes and gases surveillance and gases when welling here furnes and gases when welling keep your head out of the furne. Use enough turnes and gases way from the breathing zone. When welling with electrodes which require special ventilation such as stainless or hard facing (see instructions on container or MSDS) or no lead or cadmium plated steel and other metals or coatings which produce highly toxic furnes, keep exposure as low as possible and below Threshold Limit Values (TLV) using local exhaust or mechanical ventilation. In confined spaces or in some circumstances, outdoors, a respirator may be required. Additional precautions are also required when welding on galvanized steel.

Do not well on locations are chisomated hystogenerous

Do not weld in locations near chlorinated hydrocarbo vapors coming from degreasing, cleaning or sprayin operations. The heat and rays of the arc can react with so vent vapors to form phospene, a highly toxic gas, an other irritating products.

- Shielding gases used for arc welding can displace air and cause injury or death. Always use enough ventilation especially in confined areas, to insure breathing air is safe
- 5.d. Read and understand the manufacturer's instructions to this equipment and the consumables to be used, including the material safety data sheet (MSDS) and follow you employer's safety practices. MSDS forms are awaidate one your welding distributor or from the manufacturer

WELDING SPARKS can cause fire or explosion.

6.a. Remove fire hazards from the welding seen. If the is not possible, cover them prevent the welding sparks from starting 6.a Remove line hazards from the wedier area. If this is not possible, cover them prevent the welding sparks from steming line. Remember that westing sparks are with though small cracks and openings to adjacent areas. Avoi westing one are hydraulic lines. Have a fire extinguisher read by available.

- Where compressed gases are to be used at the job site, special precautions should be used to prevent hazardous situations. Refer to "Safety in Welding and Culting" (ANSI Standard 249 til) and the operating information for the equipment being used.
- When not welding, make certain no part of the elect circuit is touching the work or ground. Accidental co-can cause overheating and create a fire hazard.
- 6.d. Do not heat, cut or weld tanks, drums or containers until the proper sleps have been taken to insure that such procedures will not cause fammable or took vapon; from substances inside. They can cause an explosion even though they have been "cleaned." For information, purchase "Recommended Sate Practices for the Preparation for Welding and Cutting of Containers and Piping That Have Held Hazardous Substances", AWS F4.1 from the American Welding Society. (see address above).
- Vent hollow castings or containers before heating, cutting of welding. They may explode.
- Sparks and spatter are thrown from the welding arc. Wear oil free protective garments such as feather gloves, heavy shift, cuffless thousers, high shoes and a cap over your hair. Weal sear plugs when welding out of position or in confined places. Always wear safety glasses with side shelds when in a welding area.

CYLINDER may explode if damaged.
7.a. Use only compressed gas cylinder containing the correct shauken. T.a. Use only compressed gas cylinders containing the correct shielding gas for the process used and properly operating regulators designed for the gas and pressure used. All hoses, fittings, etc. should be suitable for the application and maintained in good condition.

- Cylinders should be located:

 Away from areas where they may be struck or subjet to physical damage.
- Keep your head and face away from the cylinder valve out let when opening the cylinder valve.
- 7.g. Read and follow the instructions on compressed gas cylinders, associated equipment, and CGA publication P-I, "Procaudions for Safe Handling of Compressed Gases in Cylinders," available from the Compressed Gas Association 1235 Jefferson Davis Highway, Arlington, VA 22202.

FOR ELECTRICALLY powered equipment.

3.a. Turn off input power using the disconnec switch at the fuse box before working on the equipment.
